

Mechanical jack | MMK | 3.200 - 100.000 kg

- The jacks are made of wrought iron and can withstand prolonged tough working conditions such as shipbuilding, bridge construction and civil construction.
- The self-locking feature of this auger in the fully closed ratchet mechanism excludes entry of the plunger under pressure from heavy loads and is therefore extra safe during use.
- The result is an extra smooth movement of the plunger and a lower installation height of the jacks.
- This makes them extremely suitable for applications where the available space is limited.
- From an ergonomic point of view, all jacks are equipped with a handle.

Type	MMK
Brand	Mitari
Material	Wrought iron
Category	Mechanical jacks
Finish	Painted yellow
Norm	NEN-EN 12100-V2
HS code	8425491000
